

Synectix®

The Synectix Night Answer is a dual purpose unit ideal for use in small establishments to combine the functionality of a Music On-Hold device to be used during the day and as a Night Answer device for after business hours announcement. The unit can also be programmed to announce 'holiday greetings' during week-ends and holidays.

During the day, when the business is open, the Music On-Hold function may be used to feed the on hold message to the PBX and all the callers will hear the content while they are put on hold.

After business hours the Night Answer function may be used to answer phone calls and play a recorded message giving the office timings or an alternate number to be called during emergencies etc.

The Night Answer has a built in Real Time Clock to automatically change between the functions during the Day, Night and Holidays.

Announcer Night Answer
